AW8896 Android Driver (Qcom)

INFORMATION

HAL File	Mixer_paths_xxx.xml
Driver File	aw8896.c, aw8896.h, aw8896_reg.h aw8896_reg_table.h
Smart PA	aw8896
I ² C Address	0x34/0x35/0x36/0x37
ADB Debug	yes
Platform	Msm8953

PROJECT CONFIG

#add aw8896 smartpa CONFIG SND SMARTPA AW8896=y

AUIDO DEVICE

Mixer paths xxx.xml 是一个高通音频 path 管理文件,可以对相应的 control 进行 turn on, turn off, setting。在项目对应的 mixer paths xxx.xml 文件中添加 aw8896 的 kcontrl 控 制。

```
在初始化列表中添加 SmartPa 控件:
```

```
<!-- These are the initial mixer settings -->
<ctl name="Voice Rx Device Mute" id="0" value="0" />
<ctl name="Voice Rx Device Mute" id="1" value="-1" />
<ctl name="aw8896_speaker_switch" value="Off" />
. . . . . .
在对应的 speaker path 中添加 SmartPa 控件:
<path name="speaker">
<ctl name="aw8896_speaker_switch" value="On">
```

</path>

KERNEL DRIVER

AW8896 Smart PA Driver

1. 修改 dts

```
打开 kernel/arch/arm/boot/dts/ *.dts 文件,添加 aw8896 的配置
/* AWINIC AW8896 Smart PA */
                                              /*x 表示对应的总线号*/
&i2c x {
   /*aw8896 smartpa@34*/
   i2c smartpa@34 {
      compatible = "awinic,i2c smartpa";
      reg = <0x34>;
      reset-gpio = <&tlmm 67 0>;
      /*irq-qpio = < &tlmm 132 0x01>; */
      /*interrupt-parent = <&tlmm>;*/
      /*interrupts = <132 8>; */
      status = "okay";
   };
};
/* AWINIC AW8896 Smart PA End */
```

2. 添加驱动文件

在 kernel/sound/soc/codecs/aw 目录下添加 aw8896 驱动文件 aw8896.c, aw8896.h, aw8896 reg.h,aw8896 reg table.h

3. 更新 Kconfig 和 Makefile

```
1) 在 kernel/sound/soc/codecs/Kconfig 中添加
config SND_SMARTPA_AW8896
    tristate "SoC Audio for awinic aw8896 series"
    depends on I2C
    help
        This option enables support for aw8896 series Smart PA.
2) 在 kernel/sound/soc/codecs/Makefile 中添加
#for AWINIC AW8896 Smart PA
obj-$(CONFIG_SND_SMARTPA_AW8896) += awinic/aw8896.o
```

4. 添加 aw8896 fw&cfg 文件

1) 在 kernel/drivers/base/firmware_class.c 中添加 bin 文件目录,目录由系统决定,一般目录为

```
/system/vendor/firmware 或/system/etc/firmware
static const char * const fw_path[] = {
    fw_path_para,
        "/system/vendor/firmware",
        "/system/etc/firmware",
        "/lib/firmware/updates/" UTS_RELEASE,
        "/lib/firmware/" UTS_RELEASE,
        "/lib/firmware"
};
```

```
2) 使用 adb 将 ram 文件 push 到手机中
adb push aw8896_fw.bin /system/vendor/firmware/
adb push aw8896_fw_d.bin /system/vendor/firmware/
adb push aw8896_fw_e.bin /system/vendor/firmware/
adb push aw8896_cfg.bin /system/vendor/firmware/
```

ASoc Machine Driver (以 Quinary i2s 为例)

1. snd soc dai link

```
在 kernel/sound/soc/msm/msm8952.c 中添加
#ifdef CONFIG SND SMARTPA AW8896
.name = LPASS_BE_QUIN_MI2S_RX,
.stream_name = "Quinary MI2S Playback",
.cpu dai name = "msm-dai-q6-mi2s.5",
.platform_name = "msm-pcm-routing",
.codec_name = "aw8896_smartpa",
.codec dai name = "aw8896-aif",
.dai_fmt = SND_SOC_DAIFMT_I2S | SND_SOC_DAIFMT_NB_NF |
SND SOC DAIFMT CBS CFS,
.dpcm_playback = 1,
.no pcm = 1,
.be_id = MSM_BACKEND_DAI_QUINARY_MI2S_RX,
.be_hw_params_fixup = msm_mi2s_rx_be_hw_params_fixup,
.ops = &msm8952_quin_mi2s_be_ops,
.ignore_pmdown_time = 1, /* dai link has playback support */
.ignore\_suspend = 1,
},
#else
.name = LPASS BE QUIN MI2S RX,
.stream_name = "Quinary MI2S Playback",
.cpu_dai_name = "msm-dai-q6-mi2s.5",
.platform name = "msm-pcm-routing",
.codec_dai_name = "msm_hdmi_dba_codec_rx_dai",
.codec name = "msm-hdmi-dba-codec-rx",
.no pcm = 1,
.dpcm_playback = 1,
.be_id = MSM_BACKEND_DAI_QUINARY_MI2S_RX,
.be hw params fixup = msm mi2s rx be hw params fixup,
.ops = &msm8952_quin_mi2s_be_ops,
```

```
.ignore_pmdown_time = 1, /* dai link has playback support */
.ignore_suspend = 1,
},
#endif
```

DEBUG INTERFACE

AW8896 Driver 会创建 reg/dsp 2 个设备节点文件,路径是 sys/bus/i2c/driver/i2c_smartpa/*-00xx,其中*为 i2c bus number,xx 为 i2c address。 可以使用 adb 配置 reg/dsp 参数,调试 AW8896 音效。

也可以使用 sys/kernel/debug/asoc/msm89xx/codec:aw8896_smartpa/codec_reg 节点查看 smartpa 相关寄存器状态。

reg

用于读写 AW8896 的所有寄存器。

节点使用:

读寄存器值: cat req

写寄存器值: echo "reg_addr reg_data" > reg (16 进制操作)

参考例程:

cat reg

```
reg:0x01=0x5100
reg:0x02=0x4000
reg:0x03=0x3fff
req:0x04=0x0241
reg:0x05=0x0ce8
reg:0x06=0x0030
reg:0x07=0x00a0
reg:0x08=0xa00f
reg:0x09=0x0401
reg:0x0a=0x6464
reg:0x20=0x0007
reg:0x21=0x2101
reg:0x22=0x0004
reg:0x23=0x1f1f
reg:0x60=0x1aa2
reg:0x61=0xd6fe
reg:0x62=0x307f
reg:0x63=0x0002
reg:0x64=0x0000
reg:0x65=0x0422
reg: 0x66=0x0154
reg:0x67=0x0500
```

echo "0x04 0x0241" > reg

(向 0x04 寄存器写值 0x0284)

dsp

用于读写 dsp 中的 firmware 和 config。

节点使用:

读取 dsp: cat dsp

更新 dsp: echo 1 > dsp

(更新 aw8896_fw.bin/aw8896_fw.bin)

参考例程: cat dsp 1. 无音乐

root@n391b:/sys/bus/i2c/drivers/i2c_smartpa/3-0034 # cat dsp aw889x plls=0, no iis signal root@n391b:/sys/bus/i2c/drivers/i2c_smartpa/3-0034 #

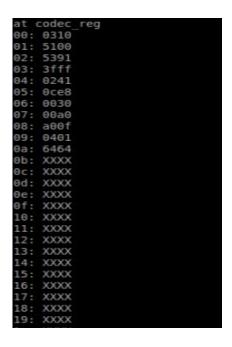

2. 有音乐

```
aw889x dsp firmware:
0x30,0xb5,0x0d,0x46,0x31,0x49,0x32,0x4c,
0xb1,0xb0,0x89,0x6b,0x21,0x60,0xc9,0x07,
0x04,0xd0,0x08,0x22,0x10,0xa9,0x00,0xf0,
0x87,0xf8,0x10,0xa8,0x21,0x68,0x89,0x07,
0x07,0xd5,0x01,0x46,0x2b,0x48,0x08,0x23,
0x6a,0x46,0x00,0x68,0x00,0xf0,0x82,0xf8,
0x68,0x46,0x21,0x68,0x49,0x07,0x07,0xd5,
0x01,0x46,0x27,0x48,0x08,0x23,0x08,0xaa,
0x00,0x68,0x00,0xf0,0x77,0xf8,0x08,0xa8,
0x21,0x68,0x09,0x07,0x07,0xd5,0x01,0x46,
0x22,0x48,0x08,0x23,0x6a,0x46,0x00,0x68,
0x00,0xf0,0x6c,0xf8,0x68,0x46,0x20,0x49,
0x08,0x23,0x0a,0x68,0x18,0xa9,0x00,0xf0,
0x6b,0xf8,0x21,0x68,0x18,0xa8,0x09,0x06,
0x03,0xd5,0x20,0xa9,0x00,0xf0,0x6a,0xf8,
0x20,0xa8,0x21,0x68,0xc9,0x05,0x03,0xd5,
0x28,0xa9,0x00,0xf0,0x69,0xf8,0x28,0xa8,
0x21,0x68,0xc9,0x06,0x03,0xd5,0x08,0xa9,
0x00,0xf0,0x2b,0xf8,0x08,0xa8,0x13,0x49,
0x08,0x23,0x0a,0x68,0x29,0x46,0x00,0xf0,
0x61,0xf8,0x31,0xb0,0x30,0xbd,0x09,0x48,
0x09,0x49,0x80,0x6b,0x00,0xbf,0x08,0x60,
0x00,0xbf,0x00,0xbf,0x00,0xbf,0x00,0xbf,
0x00,0xbf,0x00,0xbf,0x00,0xbf,0x70,0x47,
0x02,0x48,0x03,0x49,0x80,0x6b,0x08,0x60,
0x70,0x47,0x00,0x00,0x40,0x07,0x00,0x20,
0x24,0x00,0x00,0x20,0x08,0x00,0x00,0x20,
0x0c,0x00,0x00,0x20,0x10,0x00,0x00,0x20,
9x84,8x80,8x80,0x20,8x18,0x80,8x80,0x20
```

Codec_reg

Cat codec_reg

xxxx:表示该寄存器不可读

echo "reg_addr reg_data" > codec_reg 设置寄存器值

如: echo "0x05 0x01ce8" > codec_reg
